

# XWiki Enterprise 2.6 release focused on usability, security and social

*The latest version of XWiki Enterprise, the professional open source collaboration wiki, has been released. Much more than a wiki, XWiki Enterprise helps manage company critical information and improve productivity, knowledge sharing, collaboration and communication in the workplace. [XWiki Enterprise features](#) can be easily integrated in all information systems to meet the needs of professional users by facilitating the import of office documents, synchronization of files, security management and much more. XWiki Enterprise is chosen by organizations all over the world to meet their needs in knowledge capitalization, collaborative watch or technical and commercial information management.*

Paris (France), November 26<sup>th</sup>, 2010

[XWiki Enterprise 2.6](#), the latest version of XWiki Enterprise, has been released. New features in this release include:

- An overhaul of the activity stream to help better keep track of what's happening in the wiki.
- The possibility to share a page by email.

Having developed lots of new features in the past releases, the main purpose of this release has been that of stabilizing XWiki Enterprise.

Starting with the 2.0 version, XWiki Enterprise has seen many improvements and a lot of new features. The main direction of the past seven releases has been towards a better ergonomics and usability for XWiki Enterprise.

- With the new Colibri skin and the color theme editor it's easy to customize the look and feel of the wiki.
- XWiki is now more social thanks to the activity stream and avatar improvements. A new user profile and user directory have also been introduced
- Friends and colleagues can be invited to join the wiki, pages can be shared with them by email and, thanks to the new Watchlist UI, content changes are better tracked. Collaboration has never been this easy.
- Annotations have been introduced to help better share thoughts and remarks on content.
- Users and applications can provide documents that can be used as templates when creating new pages.
- It's easy to import pages with the new XAR import UI and to search those pages with the Lucene search, recently promoted as default.
- The experimental extension manager provides a better way to install new extensions on top of XWiki Enterprise.

The [latest version of XWiki Enterprise](#) contains all the changes listed above and can be [downloaded](#) from the [XWiki.org](#) website. Read more about XWiki [Products](#) and [Services](#) on [XWiki.com](#).

## About XWiki

XWiki is a young company created in 2004 that provides services around its professional open source collaboration solution (licence LGPL), XWiki Enterprise, based on a second-generation wiki. This solution is designed to help organizations and communities to organize information simply and to share it effectively. Recently, XWiki was [candidate](#) of the French call for projects "Innovating Web" with the project Wiki 3.0 and received an award at the Demo Cup. It [is also one of the 10 successful French enterprises in open source](#) (L'Informaticien, n° 68). XWiki has today over 100 customer references, and thousands of business users in France and worldwide.
